

AB COMPOSITE DECKING

Paddington Gardens has been designed by award-winning Assael Architecture and Powell Dobson Architects and occupies a 3.8-acre site within London's most exciting new residential quarter, the Paddington Waterside regeneration. The apartments and penthouses overlook beautiful landscaped gardens and feature underfloor heating, floor-to-ceiling windows, bespoke kitchens, engineered wooden flooring and a terrace, balcony or winter garden.

The design of Paddington Gardens has evolved from its garden setting with the architects crafting apartments that are connected to their environment. Expansive views over the private gardens and integrated planter boxes to every balcony and private roof terrace connect the garden surrounding to each apartment.

The towers of Paddington Gardens step up in height towards Regent's Canal, providing elegant proportions and excellent views across London from the upper floors. The elegantly proportioned façades bring together a mix of stone and glazing to provide as much light as possible, with many apartments benefiting from dual aspects.

Meeting with the design team on this project none of standard colours matched with what they were looking to achieve. With a large proportion of the building having aluminium facades, windows and balustrades all matching, we decided to manufacture a new colour composite deck board to also match. With ground space on this project very limited we had to produce and store 3,450m² of the new colour for call off.

"Having not used the AB Composite Decking previously we found them to be very knowledgeable from the installation to correct call off amounts. If there is anything we need to ask they are always there to help. AB Building Products delivered on everything they promised, I wouldn't hesitate in using them again!"
